

Brief History

Our scale

Yasan Steel Structure Company established in 1994. The core business in Yasan is design, manufacture and erect electricity transmission towers.

Yasan was founded in 7th km of Arak city – Iran in an area of 64000 m² consisting 10000 m² workshops and 54000 m² open space for storing materials and assembling sample towers. All facilities come across to 35000 MT production capacity per year as well as capability of producing and executing various voltage levels of towers ranging from 63 to 400 kV. Yasan is honor to be leading company in domestic market and also expand operation to international market.

What we have done

Other range of activities are namely telecommunication towers, Steel structural of petroleum industry and miscellaneous steel structures such as cable car poles. Technical abilities have derived from state of the art facilities with expertise and experience engineers under most reputable national and international standards such as ISO9001. Yasan's operations has led to customers satisfaction since past till now due to responsible attention of the company to projects.

Having more than two decades experience has led to well-known reputation among customers in power industry. Continuous and honest serve to customers is another reason to preserve customers' trust for long time. Outcome of our activities is reinforcing economic infrastructures of countries.

Company Mission

Mission

To provide superior quality products and services that become reliable energy infrastructure for countries. Applying newest technologies help us to enjoy competitive price and preserve our environment in terms of steel consumption.

Vision

Yasan is based for production capacity of 200,000 MT/Year and engaging more than 2000 employees to gain piece of share in global market.

International YASAN

Outlook

It has been main purpose of Yasan to provide technical services not only for domestic market, but also other developing countries which require to build up their infrastructures. With more than 30 years experience of manufacturing and supplying equipment for transmission lines, now Yasan offer the best options to implement EPC transmission projects.

Following to Yasan's marketing practices, we have officially registered following branches to proceed and fulfill local demands and this is still developing:

Sulaymaniah

Yasan Steel Structures is officially registered in 2012 and this branch has successfully implemented some transmission line projects.

Africa

Yasan Steel Structures (Africa) is officially registered in 2016 (Uganda) and this branch already participates in African projects.

Along with official presence in mentioned countries, Yasan is part of joint venture in following countries which are reputed and reliable companies in local markets :

France

Lebanon

Oman

Iraq
